Assignment 1.2: Requirement Specification:

Purpose of the System: Intended use of the system :

Users: Those who will primarily benefit from the new system and those who will be affected by the new system

Functional Requirements

- Describe what the system actually does
- Describes intended interactions between users and the system, independent of implementation

Assumptions

List any assumptions that affect the requirements, for example, equipment availability, user expertise, etc. For example, a specific operating system is assumed to be available; if the operating system is not available, the Requirements Specification would then have to change accordingly.
